3. Referring to Claim 1, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby a component inspection system whereby a 2D inspection system locates feature coordinate data and a 3D inspection system receives the coordinate data and generates inspection control data therefrom, in combination with the remaining limitations in the claim. Claims 2-8 are allowable based on their dependency upon the claim from which each is dependent. Referring to Claim 9, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby a component inspection system comprises processing 2D image feature location data, control data is determined for a 3D inspection of the component from the location data, and performing 3D inspection from the control data, in combination with the remaining limitations in the claim. Claims 10-15 are allowable based on their dependency upon the claim from which each is dependent. Referring to Claim 19, the prior art references, either considered alone or in

combination, do not disclose or render obvious the limitations whereby a method for processing image data to locate one or more features comprises receiving first image data of the component prior to installation of one or more features, receiving second image data of the component after installation of one or more features, comparing the first and second image data to generate difference data, determining the location of each of the one or more features from the difference data, and determining the placement of a three-dimensional inspection component based upon the location of each one of the one or more features, in combination with the remaining limitations in the claim. Claim 20 is allowable based on its dependency upon the claim from which it is dependent. Referring to Claim 21, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby a method for processing image data to locate one or more features comprises receiving first image data of the component prior to installation of one or more features, receiving second image data of the component after installation of one or more features, comparing the first and second image data to generate difference data, wherein determining the location of each of the one or more features from the difference data comprises using difference data to locate an edge of one or more of the features in locations where a value of brightness data of an area in the first image data is close to a value of brightness data of an area in the second image corresponding to one of the features, in combination with the remaining limitations in the claim.
